Colloquium lecture by Prof. Leonhard Schillbach

Second-person neuropsychiatry: where truly social neuroscience meets clinical psychiatry

Social neuroscience studies the neurobiology of how people make sense of people. Due to conceptual and methodological limitations, the field has only more recently begun to study social interaction rather than social observation, which has become known as the development of a 'second-person neuroscience' or an 'interactive turn' in social neuroscience. These developments have helped to elucidate the behavioral and neural mechanisms of social interactions. Taking social interaction seriously may also be particularly important for the advancement of the scientific study of psychiatric conditions, which are ubiquitously characterized by social impairments and can be thought of as 'disorders of social interaction'.

Prof. Dr. med. Leonhard Schillbach

LVR-Klinikum Düsseldorf

**This lecture takes place at Liebiggasse 5, 1010 Vienna,
Lecture Hall G 2nd floor and will be streamed.**
